

## Functional characteristics

The No-Ha<sup>®</sup> is a real innovation which is why it was patented. The system integrates door handle and magnetic lock in one box. No-Ha<sup>®</sup> enables doors to be opened and shut without a visible door handle. A special ergonomic study of the forces required to open a door has allowed the development of an internal kinetic design that requires little strength to use the No-Ha<sup>®</sup>. The strength of a child is sufficient. The system offers the possibility to make a variation of sizes or forms and to adapt the lock to the environment in which it is used. The handle can be completely hidden by giving the catch the same finish as the door and walls, or the designer can come up with a nice design without having to take into account the movement function of a door handle. (possibly with toilet lock)
